Line 5000's range includes a wide variety of washers and dryers

The new Heat Pump Dryer, T5190LE has one of the best proven performance on the market

## **Press Release**

Berlin, 27 November 2013

# **Electrolux Professional saving customers even more time, energy and costs with new breakthrough Heat Pump Dryer**

**Revolutionary technology of the newly launched Heat Pump Dryer allows customers at on-premise-laundries and apartment house laundries to save up to 60% energy for more cost efficient dry cycles.**

Electrolux Professional announces the launch of its **new Heat Pump Dryer series (T5190LE)**. Professional laundries want a solution that saves energy and costs while providing high productivity and best quality and the new T5190LE not only offers up to 60% energy savings compared to standard models, but also has one of the **best proven performance on the market**.

### **Designed by experts, Inspired by you**

The new Heat Pump Dryer was **developed with contributions from users and experts in the professional laundry field all over the world**. Their insights and know-how have helped drive improvements in engineering, ergonomics and design. **The inspiring design increases the efficiency of the process and allows easy and fast access for maintenance and repair**. It also enables the easiest and most flexible installation due to the fact that no exhaust or ventilation is needed. Additionally it has one of the smallest footprints in the market and **reduced noise level**. These benefits are complemented by the water-save-valve which secures system cooling, therefore **ensuring same drying effectiveness independent of room temperature**.

### **Smart, green and economical**

Instead of releasing its heat into the surrounding, Electrolux's Heat Pump Dryer conserves much of it, making this solution efficient and ecological. This provides clients with substantial savings and real benefits in a number of areas:

- **Flexibility:**

- **Easiness of maintenance and service**

The Easy Clean System with unique horizontal 3 filter solution, exclusively by Electrolux Professional, keeps the machine clean and minimizes maintenance.

The user-friendly new Compass Pro® interfaces are intuitive, intelligent and easy to use, and available in 18 languages

The Heat Pump box can easily be extracted from the solution for easy maintenance

The design is simple and easy to clean making it the **easiest one to use**.

**If extended maintenance or servicing is needed**, the Heat Pump box can easily be extracted from the machine for fast and convenient access to vital parts. This solution makes servicing of the machine faster than ever. In chosen markets, the Heat Pump unit can be replaced by a new clean one in **10 minutes, which will not only save time and money but also extend the lifetime of the machine.**

#### ➤ **Easiness of installation**

The unique **Plug-and-Perform installation** adds even more to the flexibility of the machine. There is no exhaust needed, heating of the room is minimal and the footprint of the machine is the same as for a conventional dryer. This means that the solution is adaptable to a diverse range of situations, fitting into the **smallest spaces**.

Furthermore, its Compass Pro® user interface also ensures a high degree of **user-friendliness** by displaying exactly which filter needs to be cleaned.

- **Enhanced economy:** The unique technology of the T5190LE **decreases energy consumption** by more than a half compared to conventional dryers with class A energy label. But while this means a drying cycle of up to 2 hours for other heat pump dryers Electrolux's T5190LE model only takes **51 minutes** to complete the full load cycle. This provides clients with real energy, costs and time savings.

With **Residual Moisture Control** Electrolux Professional shows again its innovation leadership. It measures the exact moisture content throughout the process and stops when the set moisture level is achieved. The moisture level can be adapted depending on the type of garment. This means that over-drying is prevented and that the drying time is shorter leading to energy savings.

- **Durability:** As all Electrolux Professional solutions, the T5190LE has been tested in extensive field, lab and life-time tests ensuring high durability and quality. Designed for 30,000 cycles, the machine **ensures the same drying effectiveness independent of room temperature thanks to the unique water cooling system.**

*Help at hand, whenever you need it!*

A reliable, global presence: Electrolux Professional offers **the most extensive service network of skilled, authorised partners** for daily tasks: installation, spare parts and maintenance. All provide efficient customer service and fast technical assistance. A global service network is available for prompt, expert advice worldwide.

- 1,900 authorised service centres
- Over 7,000 expert technicians
